

# HelloWorld Robotics

## Making Deliveries Smarter, Cheaper & Safer!

## GET THINGS DELIVERED BY **ROBOTS**

Last mile delivery is the most expensive part of the delivery chain, often representing more than 50% of the overall cost. This is mainly because it is the least productive and automated step. As such, we design and develop autonomous self-driving delivery network and infrastructure to solve the issues of transportation of goods in **indoor and outdoor** scenarios with fully integrated systems to **restaurants, shopping malls, hotels, university campuses, science/industrial parks, airports and etc..**

### **COST & TIME EFFECTIVE**

Reduce the time to market and setup costs for businesses that want to pay more attention to customers.

### **NO LABOR MANAGEMENT**

Reduce the cost of sourcing a fleet of riders or hiring people for goods incentives, subsidies, monthly salary and other expenses.

### **FULL SYSTEM INTEGRATION**

We are not only providing the robots but also the system integration and connect to your backend system to perform seamlessly and effortlessly.
